Customer feedback | where to focus

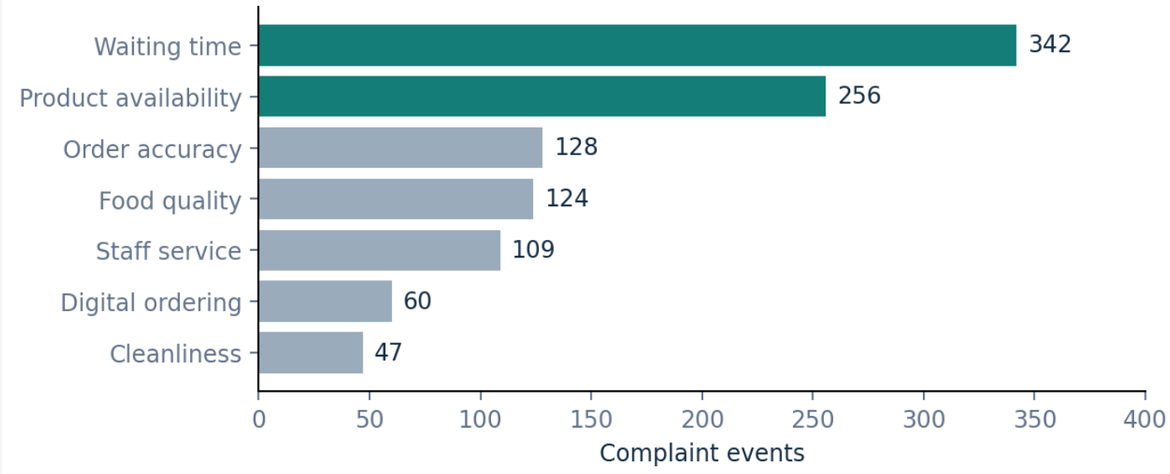

Sanket Patel / Oct 2025 - Sep 2026 / Analytical briefing - not a Power BI export

Feedback events	Average CSAT / 5	Negative feedback share	Complaints / 1,000 transactions
2,438	2.85	43.7%	0.270

Feedback volume over time

Waiting and availability lead complaints

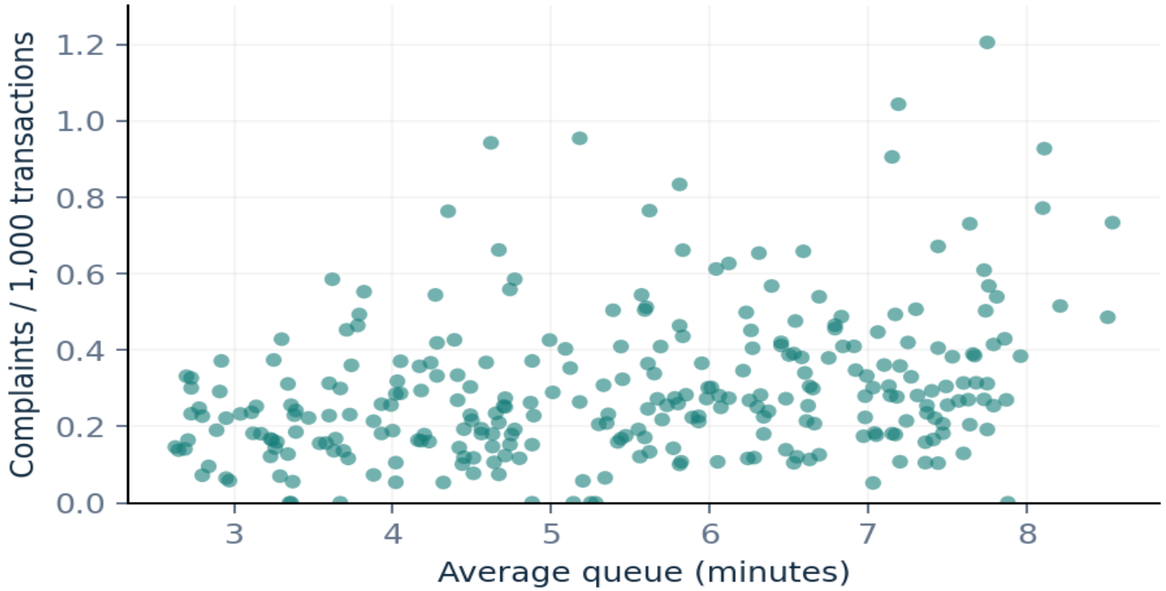

598 complaints (56.1%) concern waiting time or product availability.

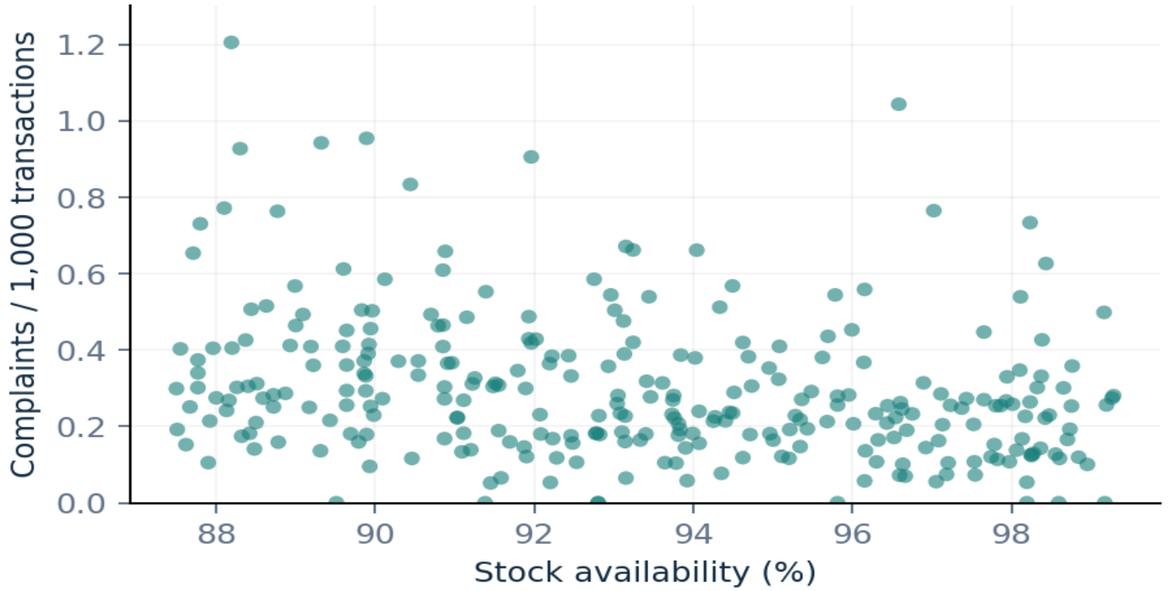

24 fictional shops | 1,066 complaints | 3,941,570 transactions. Normalised rates use total selected-period transactions, not an average of shop rates. Feedback CSAT describes respondents, not all customers.

Prepared native project source is included. Desktop refresh, DAX execution and interaction testing remain pending.

Operational signals | investigate, then test

288 shop-month observations / Correlation does not prove causation / Not a Power BI export

Queue >=6 min

0.322 vs 0.234 complaints / 1,000

529 / 1,642,607 transactions versus 537 / 2,298,963.
116 higher-queue shop-months; 172 lower-queue shop-months.
Descriptive Pearson r = 0.310 across shop-month rates.

Availability <93%

0.309 vs 0.236 complaints / 1,000

581 / 1,883,034 transactions versus 485 / 2,058,536.
135 lower-stock shop-months; 153 higher-stock shop-months.
Descriptive Pearson r = -0.275 across shop-month rates.

Interpretation limit: the generator deliberately creates these associations and fixes small feedback samples independently of transaction volume. Thresholds are illustrative. Repeated shop observations, reporting bias and unmeasured factors prevent causal interpretation.

Management priorities | measurable pilots

Full-period synthetic evidence / Three action priorities / Not a Power BI export

01

Waiting friction

342 complaints | 32.1% of complaints

Investigate and act
Investigate peak demand, task allocation and order mix. Pilot queue monitoring with matched comparison shops.

Measure success
Waiting complaints / 1K and weighted queue minutes. Guardrail: order accuracy and labour hours.

02

Availability gaps

256 complaints | 24.0% of complaints

Investigate and act
Investigate SKU/daypart shortages and forecast misses. Trial exception-led replenishment reviews.

Measure success
Availability complaints / 1K and stock availability. Guardrail: waste and markdown cost.

03

Complaint follow-up

239 open | 77.6% closed | 55.5h closed-case mean

Investigate and act
Investigate ownership, complexity and closure quality. Use weekly triage with named owners. No overdue claim.

Measure success
Open count, closure share and closed-case hours. Add case ageing and reopen data before SLA assessment.

Proposed next step: four-week pilot with a baseline, matched shops and weekly reviews.

Agree definitions before setting targets. Do not promise an uplift from this artificial dataset. Open-case duration and snapshot timing are unavailable, so closure metrics cannot establish SLA performance.

Portfolio status: source model, report pages and analysis prepared; native Desktop acceptance remains required.
