CUSTOMER FEEDBACK

Executive insight brief

Sanket Patel | Quantitative analysis and retail operations

24 shops | 2,438 feedback events | 1,066 complaints
Oct 2025 - Sep 2026. Average feedback CSAT: 2.85/5. Negative share: 43.7%. Complaint rate: 0.270 per 1,000 of 3,941,570 transactions.

01 / Waiting friction

342 complaints | 32.1% of complaints. Investigate peak demand, task allocation and order mix. Pilot queue monitoring with matched comparison shops. **KPIs:** Waiting complaints / 1K and weighted queue minutes. Guardrail: order accuracy and labour hours.

02 / Availability gaps

256 complaints | 24.0% of complaints. Investigate SKU/daypart shortages and forecast misses. Trial exception-led replenishment reviews. **KPIs:** Availability complaints / 1K and stock availability. Guardrail: waste and markdown cost.

03 / Complaint follow-up

239 open | 77.6% closed | 55.5h closed-case mean. Investigate ownership, complexity and closure quality. Use weekly triage with named owners. No overdue claim. **KPIs:** Open count, closure share and closed-case hours. Add case ageing and reopen data before SLA assessment.

Decision: Establish a baseline, agree definitions and run a proposed four-week pilot with matched shops and weekly reviews. No quantified improvement is promised.

Limitations: Synthetic, designed associations; correlation does not prove causation. Small fixed feedback samples are independent of transaction volume. Native PBIP source is prepared; Desktop refresh, DAX execution and interactions remain untested.
